## Cable entry and cable holding systems

## **Grand overview**

#### **Cable entry system**

Cable entry system for one cable and/or insertion of pre-terminated conduits. Conduits with plugs can be easily inserted into enclosures. Various systems are available for selection.

From page 10

#### **Cable entry plate**

Cable entry systems for quick installation of wites, cables and hosese. A real alternative to cable fittings. Various systems are available for selection.

#### From page 74

#### Strain relief Cable fixing plate

Strain relief and cable holding systems for strain relief and organization of conduits. Achieved easily and cost-effectively with standard cable ties.

From page 165

#### **Cable fitting**

Traditional cable fitting for insertion and strain relief of cables.

From page 189

#### Accessories

Accessories include articles like lock nuts, thread reducers, dummy plugs, cable ties, conduit clamps ...

From page 203

Tools

Tools for efficient work. Tools increase quality and productivity.

From page 231

#### **Punching tools**

Punching tool for punching of metals, e.g. control cabinets. The most varied of cut-outs in differing sizes can be simply produced with our punching tools

## Cable entry system

## Cable entry and cable holding systems

For years, Systemtechnik GmbH has offered cable entry systems, cable entry panel systems, strain relief plates and cable holding systems. Right from the beginning priority was given to a systematic approach. The priority has always been on designing products that offer definite application advantages to the customer. The KDL cable entry system has been developed to enable pre-assembled cables e.g. servo cables, computer cables and bus-leads, to be fed into control panels without the need to remove the plugs. An additional advantage is that the design also offers

strain relief to the cables. During the design process, considerable emphasis was given That is why the divisibility of the KDL product range makes assembly much more straightforward. The potential for strain relief and discharge of sheath currents has also been integrated into the cable fixing plate. A further innovation is the KDP cable entry plate, which offers a real alternative to cable fittings. The KDP boasts enormous savings potential through rapid installation. A lower footprint and user-friendly assembly are two of the major advantages that this product offers. However, these are just some of the outstanding innovations from

Systemtechnik GmbH. We've used materials that ensure that the user is always offered a product that matches his particular application. Official approvals such as EN, DIN, BS, NFF and UL and grades of fire protection from HB to V0, together with an IP rating appropriate for the specific application, guarantee a high degree of security and productivity. It should be expressly emphasized that all MP products are developed and manufactured according to the latest criteria. Even during the development process, environmentally friendly production and the use of environmentally compatible materials are key considerations. The products and systems undergo a wide range of tests in our own laboratory. Where available, we utilize German DIN, European, or UL standards. Our engineers can, on request, create specific test criteria in collaboration with the customer. Ongoing tests ensure a high level of quality. Our cable entry and strain relief systems are largely marketed worldwide through our own sales network.

Otherwise, sales are handled by a qualified network of dealers. Both sales organizations have competent staff for you to talk to. All sales organizations have their own warehouse, enabling rapid delivery periods (just in time).
