

Electromotive 2 way angle seat control valve

- Good and fast control
- Weather, impact and vibration resistant design
- Easy cleaning by its design according hygienic demands
- Position controller and process controller available

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

	Type 3320 Electromotive 2/2 way angle seat valve	▶
	Type 3321 Electromotive 2/2 way globe valve	▶
	Type 3361 Electromotive 2 way globe control valve	▶
	Type 8098 FLOWave SAW flow- meter	▶
	Type ME43 Fieldbus gateway	

Type description

The innovative process controller Bürkert valve Type 3360 is the solution when it comes to control tasks under demanding operating conditions.

The electromotive actuator with ball screw positions the control cone with highest precision. A unique feature is its high positioning speed of 6 mm/s, that reacts quasi delay-free to process signals, and can be varied according to customer demands. Pressure variations or shocks in the medium aren't transferred to the valve position. If necessary, the safety position can be approached by an optional energy storage in case of power failure.

Actuator and valve are adapted perfectly to each other with closed design and robust surface. This ensures the hygienic requirements of a fast and residue-free cleaning.

Harsh environments are no problem for the Type 3360 because of the protection class IP65/IP67 and its high impact and vibration resistance. Unrivalled cycle life and sealing integrity is guaranteed by the proven self adjusting spindle packing with exchangeable V-seals.

The fieldbus suitable Type 3360 provides many helpful functions for process monitoring, valve diagnostics and predictive maintenance and thus offers the decisive advantage of a modern process automation.

1. General Technical Data

Product properties	
Dimensions	Detailed information can be found in chapter “4. Dimensions” on page 7.
Material	Detailed information can be found in chapter “3. Materials” on page 5.
Design	Angle seat control valve
Controller versions	Position controller or process controller (optional)
Nominal diameter	DN15...50, NPS ½...2
Flow direction	Against closing direction (below seat)
Safety setting in case of power failure	With SAFEPOS energy-pack: open, closed or freely programmable Without SAFEPOS energy-pack: blocked in last position
Weight	4 kg (only actuator, total weight depends on the cable connection)
Performance data	
Operating pressure	0...25 bar(g) (see “5.1. Fluidic data” on page 12) Vacuum version up to -0.9 bar(g) (optional)
Nominal pressure	PN 25 (DIN EN 1333), Class 150 (DIN EN 1759)
Seat leakage (DIN EN 60534-4)	Class III, IV and VI (see “5.1. Fluidic data” on page 12)
K _{VS} value	5...53 m³/h (see “5.1. Fluidic data” on page 12)
Flow characteristic	Modified equal percentage (see “5.1. Fluidic data” on page 12)
Closing time	2.3...6.2 s (depending on travel speed and stroke)
Travel speed	6 mm/s (for actuator force 1300 N) 4 mm/s (for actuator force 2500 N)
Dead band of the position control	±0.1 %
Electrical data	
Operating voltage	24 V DC ± 10 % (max. residual ripple 10 %)
Operating current ¹⁾	Max. 3 A (at max. load and including 1 A charging current of the optional SAFEPOS energy-pack) At minimum operating temperature additionally 2 A
Protection class (DIN EN 61140)	3
Duty cycle	100 %
Standby consumption ¹⁾	2...5 W
Communication and control	
Standard signals (analogue)	Setpoint: 0/4...20 mA, 0...5/10 V and binary input (further inputs and outputs optional, see “5.3. Electrical control and interfaces” on page 16)
Fieldbus (digital)	Bürkert system bus (būS) CANopen (optional) EtherNet/IP, PROFINET, Modbus/TCP (optional via integrated gateway)
Media data	
Medium	Steam, neutral gases, water, alcohols, oils, fuels, hydraulic fluids, salt solutions, lyes, organic solvents, oxygen (optional)
Medium temperature	-40 °C...+230 °C (see “5.2. Operating limits” on page 13)
Viscosity	Up to 600 mm²/s
Approvals and certificates	
Conformity	Food EGV 1935/2004 FDA (optional)
Approvals	Explosion protection ATEX/IECEx (optional) (see “2. Approvals” on page 4) cULus Cert. No. 238179 (optional) (see “2. Approvals” on page 4)
Ignition protection class	II 3G Ex ec IIC T4 Gc II 3D Ex tc IIIC T135 °C Dc
Process/Port connection & communication	
Port connection²⁾	
Threaded connection	G (EN ISO 228-1) Rc (ISO 7/1 /DIN EN 10226-2) NPT (ASME B 1.20.1)
Welded connection	DIN EN ISO 1127/ISO 4200/DIN 11866 B DIN 11850 2/DIN 11866 A ASME BPE/DIN 11866 C SMS 3008
Clamp connection	DIN 32676 B (pipe ISO 4200) DIN 32676 A (pipe DIN 11850 2) ASME BPE

Electrical connection

Actuator	Terminal connector with cable gland, 3 x M20 or 2 M12 circular plugs, 5 pin and 8 pin, 1 M12 circular socket, 5 pin (only with process controller function)
Fieldbus gateway	2 M12 circular sockets, 4 pin (only with Industrial Ethernet)

Environment and installation

Ambient temperature	-25...+65 °C (only without additional modules) (Derating see “Operating limits for ambient and medium temperature” on page 14)
Degree of protection	IP65/IP67 (DIN EN 60529), NEMA 4X

Vibration and shock resistance

Vibration, sinusoidal	5 g (IEC 60068-2-6 Test Fc)
Shock, mechanical	50 g (IEC 60068-2-27 Test Ea)
Installation position	Any, preferably actuator face up

1.) All values refer to a supply voltage of 24 V at 25 °C.

2.) Others on request

2. Approvals

Approval	Description
	Food produce contact Materials in contact with medium conform to EC regulation 1935/2004 Materials in contact with medium conform to FDA (optional)
	Drinking water Suitable for use with drinking water according to KTW, W270 (optional)
	Oxygen Suitable for use with gaseous oxygen (optional)
 	Explosion proof As category 3 device suitable for zone 2/22 (optional) ATEX • II 3G Ex ec IIC T4 Gc • II 3D Ex tc IIIC T135 °C Dc IECEx • Ex ec IIC T4 Gc • Ex tc IIIC T135 °C Dc
	Safety requirements UL-listed cULus Cert. No. 238179 (optional)
Standards	Description
	Field device for integration into the EDIP platform via Bürkert system bus (bÜS)

3.1. Chemical Resistance Chart – Bürkert resistApp

Bürkert resistApp – Chemical Resistance Chart

You want to ensure the reliability and durability of the materials in your individual application case? Verify your combination of media and materials on our website or in our resistApp.

Start Chemical Resistance Check

3.2. Material specifications

Note:
The Type 3360 angle seat valve is supplied with various port connections (flange, thread, weld end and clamp connections). These connections are not shown. They are the same material as the valve body.

No.	Component	Material
1	Display housing/Blind cover	PPS (Standard), Stainless steel 1.4301 (for ATEX/IECEX)
2	Actuator cover	PPS
3	Seal	EPDM
4	Actuator housing	Aluminium powder coated
5	Seal	EPDM
6	Actuator base	PPS

No.	Component	Material
1	Spindle	Stainless steel 1.4401 (316)/1.4404 (316L)
2	Spindle seal	PTFE- V-seals (filled) with spring compensation
3	Spindle guidance	Stainless steel 1.4404 (316L)
4	Packing gland tube	Stainless steel 1.4401 (316)
5	Seal valve body	Graphite or PTFE
6	Control cone	Stainless steel 1.4571
7	Seat seal	Stainless steel 1.4571/PTFE or PEEK seal washer
8	Valve body	Stainless steel CF3M

4. Dimensions

4.1. Complete valve Type 3360

Note:

Dimensions in mm, unless otherwise stated

Nominal diameter (Pipe)		Height/Width ^{1.)}	
DN	NPS	H1/B1	H2/B2 ^{2.)}
15	1/2	311	362
20	3/4	319	369
25	1	334	385
32	1 1/4	349	399
40	1 1/2	352	403
50	2	367	418

1.) Dimensions without tight-closing function: in closed position the actuator additionally lifts by approx. 2 mm

2.) Optional: integrated fieldbus gateway

4.2. Body with threaded connection

Note:
Dimensions in mm, unless otherwise stated

Nominal diameter (Pipe)	G (DIN ISO 228-1), NPT (ASME B 1.20.1), Rc (ISO7-1)					CM	LM	SW

5. Performance specifications

5.1. Fluidic data

Flow characteristics

- Flow characteristic acc. to DIN EN 60534-2-4
- Modified equal percentage flow characteristic theoretical rangeability: $K_{VS}/K_{V0} = 50:1$
- K_{VR} value^{1.)} at 5 % of stroke

1.) K_{VR} value = smallest K_V value at which the inclination tolerance according to DIN EN 60534-2-4 can still be maintained.

Overview of flow characteristics with flow below seat

Note:

- K_V value [m^3/h]: Measured with water acc. to DIN EN 60534-2-3
- Operating limits, see [“5.2. Operating limits”](#) on page 13

Nominal diameter (Pipe)		Actuator force	Operating pressure (seat leakage class)			Characteristic curve (theoretical rangeability)	K _V value at stroke						K _{vs} value
			Valve seat seal				5 %	10 %	30 %	50 %	70 %	90 %	
			Stainless steel	PTFE	PEEK								
DN	NPS	[N]	[bar(g)]				[m³/h]						[m³/h]
15	½	1300	25 (IV)	–	16 (VI)	equal percentage (50:1)	0.16	0.17	0.4	2.7	4.0	4.8	5

		2500	10 (III)	10 (VI)	6 (VI)								

5.2. Operating limits

Operating limits for medium temperature and operating pressure

The operating range of Bürkert process valves is in addition to the maximum operating pressures limited by the nominal pressure according to the relevant standard.

Operating limits for ambient and medium temperature

The maximum permissible temperature for the environment and the medium are dependent on each other. The maximum allowable temperature curves of different device variants can be seen in the temperature chart. The curves were determined for maximum operating conditions (max. operating pressure and motor power). For deviating operating conditions an individual verification can be performed. Please contact your Bürkert office for more information.

Operating limits seat seal

Tight sealing required	Leakage class (DIN EN 60534-4)	Medium temperature	Seat seal
No An additional shut-off valve is recommended	III/IV (metal seals) Metal-sealed valves have larger leakages (0.1 % or 0.01 % of the nominal flow rate are permissible). Metallic seals are impervious even under demanding process conditions.	-40...230 °C	Stainless steel
Yes An additional shut-off valve is often unnecessary.	VI (soft seals) By using plastics as sealing material, the control valves can close tightly. Their use is not recommended in cases of increased erosion due to demanding process conditions.	-40...130 °C (recommended for ≤ 130 °C)	PTFE
		-10...230 °C (recommended for > 130 °C)	PEEK

Operating limits for optional versions

High temperature version

By adapting the spindle sealing this version is suitable for applications with steam, neutral gases and other heat transfer mediums up to 230 °C.

Drinking water version

Materials in contact with the medium are tested for suitability with drinking water up to 85 °C.

Vacuum version

Without leakage bore, this design is suitable for pressures down to -0.9 bar(g).

Low temperature version

Suitable for minimum medium temperatures down to -40 °C

Version for oxygen

Non-metallic materials in contact with the medium are tested for suitability with oxygen. Suitable for operating pressures up to 20 bar(g) and medium temperatures up to 60 °C.

5.3. Electrical control and interfaces

Interface diagram

The position of the actuator is controlled according to the position setpoint. The position setpoint is given either by an external standard signal (analogue) or via a fieldbus (digital).

Analogue control

For the analogue control 2 variants each are available for the inputs and outputs and the connection interface.

Inputs and outputs:

- 1 analogue input, 1 binary input
- 1 analogue input, 1 binary input, 1 analogue output, 2 binary output (optional)
- 1 analogue input process actual value (for optional version with process controller)

Interface:

- Cable gland with connection terminal
- M12 circular plug-in connectors (optional)

Control data

Analogue input (setpoint signal)	Galvanically isolated from supply voltage and analogue output 0/4...20 mA (input resistance 60 Ω) 0...5/10 V (input resistance 22 kΩ)
Digital input	0...5 V = log "0", 10...30 V = log "1" inverted input reversed accordingly
Analogue output (optional)	Max. Current 10 mA (for voltage output 0...5/10 V) Burden (load) 0...560 Ω (for current output 0/4...20 mA)
Digital output (optional)	Current limitation 100 mA

Analogue input (Actual value signal for process controller function) (optional)

4...20 mA	Input resistance: 60 Ω Resolution: 12 bit
Frequency	Measuring range: 0.2...6500 Hz Input resistance: >30 kΩ Accuracy: 0.1 % of measured value Input signal: >300 mVpp Signal shape: sine, rectangle, triangle
Pt 100	Measuring range: -20...+220 °C Accuracy: 0.01 °C Measuring current: 1 mA

Communication

Communication interface (bUS)	Connection to PC via USB bUS interface set (connection terminals, circular plug-in connector or bUS service interface)
Communication software (bUS)	Bürkert Communicator, see Type 8920 ►

6. Product design and assembly

6.1. Product features

Note

More detailed information can be found in the **operating instructions** ►.

User interface	
Device without display module: In the version without operating display, the basic functions are operated via 4 DIP switches and 2 push buttons. These are located under the blind cover, which can be removed by turning it manually. The device can also be configured in detail with the Bürkert Communicator software via the bÜS service interface	Blind cover dismantled
Rugged Touch Display (optional): The robust display module offers convenient operation, configuration and display of all necessary functions. Besides the start screen, various views can be freely configured. The bÜS service interface is also available here under the display module. The display cannot be retrofitted in the field..	
Actuation	
Mechanical manual control: The manual override for mechanical movement of the valve is located under the blind cover or display module and ensures that the actuator can be operated even if the power supply fails.	
Electrical control via operating elements: The electrical manual override for operation can be carried out directly on the touch display or, in the version without display, via two buttons under the blind cover.	
Display elements	
Display 360° LED light ring: A clearly visible 360° LED ring is attached to the blind cover or display module to indicate the device status, the valve end position and the operating status. The LED light ring lights up, blinks or flashes into one or changing colours, depending on the LED mode set Mechanical position indicator: The mechanical position indicator shows the current valve position even if the supply voltage fails.	
Data transmission (optional)	
SIM card (optional): With the optionally available SIM card, device-specific values and user settings can be stored and quickly transferred to another device.	

Safety position via energy storage (optional)

The safety starting positions in case of power interruption is realized with the optional energy storage SAFEPOS energy-pack. The desired position is set via the menu. In addition to the end positions (open/closed), any desired intermediate position can be defined here. The energy storage has a lifespan of up to 10 years, depending on the operating conditions. The power of the energy storage is monitored and a warning is displayed to indicate its life is coming to an end. The storage device is designed as a plug-in module to facilitate replacement. Without energy storage, the valve remains in the last position it was in. The energy storage device is fully charged and ready for operation after a maximum of 100 seconds (depending on the operating conditions). The energy storage device cannot be retrofitted in the field.

SAFEPOS
energy-pack**Fieldbus: EtherNet/IP, PROFINET, Modbus TCP (optional)**

The fieldbus gateway for EtherNet/IP, PROFINET and Modbus TCP is integrated in an additional module. It has 2 fieldbus connections with 4 pin M12 circular sockets. The interfaces for the fieldbus connection and the status LEDs are located under the gateway housing cover. If there is a need for it to be include in a network then the configuration of the Ethernet can be performed via the web server. The gateway cannot be retrofitted in the field.

Display module

Fieldbus gateway

Fieldbus M12 connection
(2 Port Ethernet Switch)

6.2. Product assembly

The electromotive linear drive consists of a brushless DC motor, a gear and a spindle system that transfers the force to the control cone. The integrated control electronics are controlled either via standard signals (analog) or via a field bus (digital). A positioner and a process controller are available as controller versions. The electromotive linear actuator is designed to provide optimum efficiency. At the same time, it keeps the valve tight and in position even at the maximum specified medium pressure in a powerless standstill. An optional energy storage device (SAFEPOS energy-pack) is available for the device. If the supply voltage fails, it supplies the actuator with the energy required to move the valve into the desired position, which can be set in the menu.

The valve position can be changed manually in 2 ways. Either via the electrical manual control or via a mechanical manual control if no supply voltage is available. The device can be set and operated either via 2 capacitive keys and 4 DIP switches or optionally on a display with touch screen. In addition there is always the possibility to operate the device via the bÜS service interface and using the "Bürkert Communicator" software.

The intelligent process valve Type 3360 offers the operator options for process monitoring, valve diagnosis and preventive maintenance. Internal measurements of the operating status are evaluated and, if necessary, issued as a warning or error message. These signal, for example, impermissible ambient and process conditions, functional deviations of components or the status of the energy storage device

Integrated position controller

The position of the actuator (stroke) is controlled according to the position setpoint. The position setpoint is either given by an external standard signal (analog) or via a fieldbus (digital). The displacement transducer records the actual position (POS) of the electric linear actuator. This actual position value is compared by the positioner with the position setpoint (CMD) specified as standard signal. If there is a system deviation (Xd1), the electric motor drive is controlled via the manipulated variable CTRL and the actual position value is changed accordingly.

Integrated process controller (optional)

The additionally implemented PID controller allows process control. The setpoint position of the valve is calculated from the external signal (e.g. level, pressure, flow rate, temperature) for the process setpoint and the actual process value via the control parameters (PID controller).

Thank you for your interest in our products! In order to provide you with optimum advice, please fill out the following form and send it to your **Bürkert representative** or e-mail address: info@buerkert.com. All information submitted will of course be kept strictly confidential.

Please fill in the **required fields!** *

*Note: The interactive functions of this PDF may be restricted depending on the PDF reader used.

Personal Information			
Company		Contact person	
Customer no.		Department	
Street		Postcode / Town	
Telephone no.		Email	

Delivery	
Quantity	Required delivery date

Operating data	
Function (Function of the control valve in the process / process description)	
Pipeline	DN PN
Operating medium	
Type of medium	Fluid Steam Gas

Fluidic data	Largest flow rate 1. Operating point	Largest flow rate 2. Operating point	Largest flow rate 3. Operating point	Unit
Flow rate				
Temperature t_1				
Inlet pressure p_1 absolute (a) relative (g)				
Outlet pressure p_2 absolute (a) relative (g)				
Steam pressure p_v				
Viscosity (v / η)				
Density (ρ)				
Max. permitted sonic pressure level (L_p)				

Valve body				
Construction	Angle seat valve		Globe valve	
DN / Nominal pressure	DN		PN	
Seat size				
Flow coefficient	K_{vs}	m^3/h	C_v	GPM(US)
Seat seal	metallic		soft seal PTFE soft seal PEEK	
Connection	Flange	DIN EN 1092-1	ANSI B16.5	JIS 10K
	Thread	G	NPT	RC
	Weld	DIN EN ISO 1127 / ISO 4200	DIN 11850 2 / DIN 11866 A	ASME BPE
	Clamp	ASME BPE	DIN 32676 A (tube ISO 4200)	DIN 32676 B (tube DIN 11850)
	Other			

Valve data			
Safety position	With energy storage (factory setting NO) With energy storage (factory setting NC) Without energy storage (last valve position blocked)		
Function	Positioner	Process controller	
Operation	With Touch-Display	Without Touch-Display, internal button	
Electrical connection	Cable gland	M12 multi-pin plug connection	
Communication	Analogue: Digital (Fieldbus):	1 AI, 1 DI EtherNet/IP CANopen	1 AI, 1 DI, 1 AO, 2 DO PROFINET Modbus TCP
SIM card	With	without	

Approvals / Conformities
For use with food (conform to EG regulation no. 1935/2004)
For use with food (conform to FDA)
Explosion protection in accordance with ATEX II 2GD mech. / IECex
European Gas Appliances Directive (EU) 2016/426, DVGW DINEN 161 and DIN EN 16678
For potable water according to KTW/W270
Certificate for the fulfilment of the order EN-ISO 10204 2.1 (Article no. 440788)
Test report EN-ISO 10204 2.2 (Article no. 803722)
Conformity certification for raw material EN-ISO 10204 3.1 (included)
cULus

Additional Requirements / Comment
