

Electromotive 2 way globe control valve

- High precise and fast flow control
- Several K_{VS} value per port size due to removable valve seats
- Weather, impact and vibration resistant design
- Easy cleaning by its design according hygienic demands
- Position controller and process controller available

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

	Type 3320 Electromotive 2/2 way angle seat valve	▶
	Type 3321 Electromotive 2/2 way globe valve	▶
	Type 8098 FLOWave SAW flow-meter	▶
	Type ME43 Fieldbus gateway	▶

Type description

The innovative process controller Bürkert valve Type 3361 is the solution when it comes to demanding control tasks and operating conditions.

The electromotive actuator with ball screw positions the control cone with highest precision. A unique feature is its high positioning speed of 6 mm/s, that reacts quasi delay-free to process signals, and can be varied according to customer demands. Pressure variations or shocks in the medium aren't transferred to the valve position. Each flow optimized valve housing can be equipped with up to 5 different valve seats for a precise adaptation according to customer needs. If necessary, the safety position can be approached by an optional energy storage in case of power failure.

Actuator and valve are adapted perfectly to each other with closed design and robust surface. This ensures the hygienic requirements of a fast and residue-free cleaning.

Harsh environment are no problem for the Type 3361 because of the protection class IP65/IP67 and its high impact and vibration resistance. Unrivalled cycle life and sealing integrity is guaranteed by the proven self adjusting spindle packing with exchangeable V-seals.

The fieldbus suitable Type 3361 provides many helpful functions for process monitoring, valve diagnostics and predictive maintenance and thus offers the decisive advantage of a modern process automation.

1. General Technical Data

Product properties	
Dimensions	Detailed information can be found in chapter “4. Dimensions” on page 8.
Material	Detailed information can be found in chapter “3. Materials” on page 6.
Design	Globe control valve
Controller versions	Position controller or process controller
Nominal diameter	DN10...50, NPS ¾...2
Flow direction	Against closing direction (below seat)
Safety setting in case of power failure	With SAFEPOS energy-pack: open, closed or freely programmable Without SAFEPOS energy-pack: blocked in last position
Weight	4 kg (only actuator, total weight depends on the port connection)
Performance data	
Operating pressure	0...25 bar(g) (see “5.1. Fluidic data” on page 14) Vacuum version up to -0.9 bar(g) (optional)
Nominal pressure	PN25 (DIN EN 1333), Class 150 (DIN EN 1759)
Seat leakage (DIN EN 60534-4)	Class III, IV and VI (see “5.1. Fluidic data” on page 14)
K _v value	0.1...37 m³/h (see “5.1. Fluidic data” on page 14)
Flow characteristic	Linear or equal percentage (see “5.1. Fluidic data” on page 14)
Theoretical rangeability	Up to 50:1 (see “5.1. Fluidic data” on page 14)
Closing time	3.3...6.2 s (depending on travel speed and stroke)
Travel speed	6 mm/s (for actuator force 1300 N) 4 mm/s (for actuator force 2500 N)
Dead band of the position control	±0.1 %
Electrical data	
Operating voltage	24 V DC ±10 % (max. residual ripple 10 %)
Operating current ¹⁾	Max. 3 A (at max. load and including 1 A charging current of the optional SAFEPOS energy-pack) At minimum operating temperature additionally 2 A
Protection class (DIN EN 61140)	3
Duty cycle	100 %
Standby consumption ¹⁾	2...5 W
Communication and control	
Standard signals (analogue)	Setpoint: 0/4...20 mA, 0...5/10 V and binary input (further inputs and outputs optional, see “5.3. Electrical control and interfaces” on page 19)
Fieldbus (digital)	Bürkert system bus (bÜS) (Standard) CANopen (optional) EtherNet/IP, PROFINET, Modbus/TCP (optional via integrated gateway)
Media data	
Medium	Steam, neutral gases, water, alcohols, oils, fuels, hydraulic fluids, salt solutions, lyes, organic solvents, oxygen (optional)
Medium temperature	-40...+230 °C (see “5.2. Operating limits” on page 16)
Viscosity	Up to 600 mm²/s
Approvals and certificates	
Conformity	Food EGV 1935/2004 FDA (Optional)
Approvals	Explosion protection ATEX/IECEx (Optional) (siehe “2. Approvals” on page 5) cULus (Optional) (siehe “2. Approvals” on page 5)
Ignition protection class	II 3G Ex ec IIC T4 Gc II 3D Ex tc IIIC T135 °C Dc

Process/Port connection & communication**Port connection²⁾**

Flange connection	DIN EN 1092-1 ANSI B 16.5 JIS 10K
Threaded connection	G (EN ISO 228-1) Rc (EN ISO 228-1, ISO 7/1 /DIN EN 10226-2) NPT (ASME B 1.20.1)
Welded connection	DIN EN ISO 1127/ISO 4200/DIN11866 B DIN 11850 2/DIN 11866 A ASME BPE/DIN 11866 C SMS 3008
Clamp connection	DIN 32676 B (pipe ISO 4200) DIN 32676 A (pipe DIN 11850 2) ASME BPE

Electrical connection

Actuator	Terminal strip with cable gland, 3 x M20 or 2 M12 circular plugs, 5 pin and 8 pin, 1 M12 circular socket, 5 pin (only for process controller function)
Fieldbus gateway	2 M12 circular sockets, 4 pin (only for industrial ethernet)

Environment and installation

Ambient temperature	-25...+65 °C (only without additional modules) (Derating see "Operating limits for ambient and medium temperature" on page 17)
Degree of protection	IP65/IP67 (DIN EN 60529), NEMA 4X

Vibration and shock resistance

Vibration, sinusoidal	5 g (IEC 60068-2-6 Test Fc)
Shock, mechanical	50 g (IEC 60068-2-27 Test Ea)
Installation position	Any, preferably actuator face up

1.) All values refer to a supply voltage of 24 V at 25 °C.

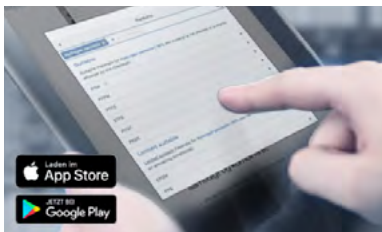

2.) Others on request

2. Approvals

Approval	Description
	Food produce contact Materials in contact with medium conform to EC regulation 1935/2004 Materials in contact with medium conform to FDA (optional)
	Drinking water Suitable for use with drinking water according to KTW, W270 (optional)
	Oxygen Suitable for use with gaseous oxygen (optional)
 	Explosion proof As category 3 device suitable for zone 2/22 (optional) ATEX <ul style="list-style-type: none"> • II 3G Ex ec IIC T4 Gc • II 3D Ex tc IIIC T135 °C Dc IECEX <ul style="list-style-type: none"> • Ex ec IIC T4 Gc • Ex tc IIIC T135 °C Dc
	Safety requirements UL-listed cULus Cert. No. 238179 (optional)
Standards	Description
	Field device for integration into the EDIP platform via Bürkert system bus (büS)

3.2. Material specifications

Note:

The Type 3361 globe control valve is supplied with various port connections (flange, thread, weld end and clamp connections). These connections are not shown. They are the same material as the valve body.

No.	Component	Material
1	Display housing/Blind cover	PPS (Standard), Stainless steel 1.4301 (for ATEX/IECEX)
2	Actuator cover	PPS
3	Seal	EPDM
4	Actuator housing	Aluminium powder coated
5	Seal	EPDM
6	Actuator base	PPS

No.	Component	Material
1	Spindle	Stainless steel 1.4401 (316)/1.4404 (316L)
2	Spindle seal	PTFE V-seals (filled) with spring compensation
3	Spindle guidance	Stainless steel 1.4404 (316L)
4	Packing gland tube	Stainless steel 1.4401 (316)
5	Seal valve body	Graphite or PTFE
6	Seat seal	Stainless steel 1.4571/PTFE or PEEK seal washer
7	Control cone	Stainless steel 1.4571
8	Valve seat	Stainless steel 1.4571
9	O-Ring valve seat	EPDM
10	Valve body	Stainless steel CF3M

4. Dimensions

4.1. Complete valve Type 3361

Note:

Dimensions in mm, unless otherwise stated

Nominal diameter (Pipe)		Height ^{1.)}	
DN	NPS	H1	H2 ^{2.)}
10	3/8	417	489
15	1/2	417	489
20	3/4	423	495

5. Performance specifications

5.1. Fluidic data

Flow characteristics

- Flow characteristic acc. to DIN EN 60534-2-4
- Theoretical rangeability: K_{VS}/K_{V0} (see [“Overview of flow characteristics with flow below seat” on page 15](#))
- K_{VR} value^{1.)} at 5 % of stroke for seat size > 10
- K_{VR} value at 10 % of stroke for seat size ≤ 10
- The globe control valve has different flow characteristics and theoretical rangeabilities depending on the seat size (see [“Overview of flow characteristics with flow below seat” on page 15](#))
 - equal percentage or linear
 - 10:1, 25:1, 50:1

1.) K_{VR} value = smallest K_V value at which the inclination tolerance according to DIN EN 60534-2-4 can still be maintained.

Overview of flow characteristics with flow below seat
Note:

- K_v value [m^3/h]: Measured with water acc. to DIN EN 60534-2-4
- Operating limits, see **"5.2. Operating limits"** on page 16

Nominal diameter (Pipe)		Seat size	Actuator force	Operating pressure (Seat leakage class)			Characteristics (theoretical rangeability)	K_v value at stroke						K_{vs} value

5.2. Operating limits

Operating limits for medium temperature and operating pressure

The operating range of Bürkert process valves is in addition to the maximum operating pressures limited by the nominal pressure according to the relevant standard.

- Operating limits for PN25 acc. to DIN EN 12516-1
- Operating limits for flange 10K acc. to JIS B 2220
- Operating limits for Class 150 acc. to ASME B16.34
- Saturated steam curve for water

Operating limits for ambient and medium temperature

The maximum permissible temperature for the environment and the medium are dependent on each other. The maximum allowable temperature curves of different device variants can be seen in the temperature chart. The curves were determined for maximum operating conditions (max. operating pressure and motor power). For deviating operating conditions an individual verification can be performed. Please contact your Bürkert office for more information.

Operating limits seat seal

Tight sealing required	Leakage class (DIN EN 60534-4)	Medium temperature	Seat seal
No An additional shut-off valve is recommended	III/IV (metal seals) Metal-sealed valves have larger leakages (0.1 % or 0.01 % of the nominal flow rate are permissible). Metallic seals are impervious even under demanding process conditions.	-40...230 °C	Stainless steel
Yes An additional shut-off valve is often unnecessary.	VI (soft seals) By using plastics as sealing material, the control valves can close tightly. Their use is not recommended in cases of increased erosion due to demanding process conditions.	-40...130 °C (recommended for ≤ 130 °C)	PTFE
		-10...230 °C (recommended for > 130 °C)	PEEK

DTS 1000273772 EN Version: K Status: RL (released | freigegeben | validé) printed: 01.12.2020

Operating limits for optional versions

High temperature version

By adapting the spindle sealing this version is suitable for applications with steam, neutral gases and other heat transfer mediums up to 230 °C.

Drinking water version

Materials in contact with the medium are tested for suitability with drinking water up to 85 °C.

Vacuum version

Without leakage bore, this design is suitable for pressures down to -0.9 bar(g).

Low temperature version

Suitable for minimum medium temperatures down to -40 °C

Version for oxygen

Non-metallic materials in contact with the medium are tested for suitability with oxygen. Suitable for operating pressures up to 20 bar(g) and medium temperatures up to 60 °C.

5.3. Electrical control and interfaces

Interface diagram

The position of the actuator is controlled according to the position setpoint. The position setpoint is given either by an external standard signal (analogue) or via a fieldbus (digital).

Analogue control

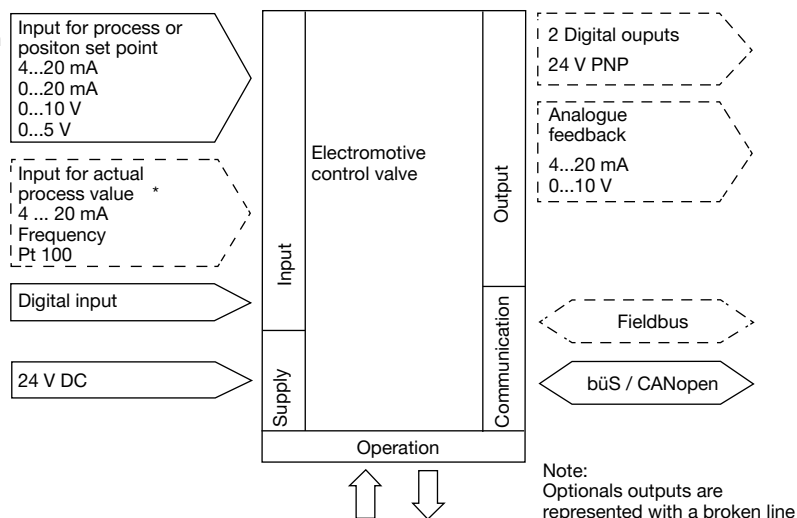

For the analogue control 2 variants each are available for the inputs and outputs and the connection interface.

Inputs and outputs:

- 1 analogue input, 1 binary input
- 1 analogue input, 1 binary input, 1 analogue output, 2 binary output (optional)
- 1 analogue input process actual value (for optional version with process controller)

Interface:

- Cable gland with connection terminal
- M12 circular plug-in connectors (optional)

Control data	
Analogue input (setpoint signal)	Galvanically isolated from supply voltage and analogue output 0/4...20 mA (input resistance 60 Ω) 0...5/10 V (input resistance 22 kΩ)
Digital input	0...5 V = log "0", 10...30 V = log "1" inverted input reversed accordingly
Analogue output (optional)	Max. Current 10 mA (for voltage output 0...5/10 V) Burden (load) 0...560 Ω (for current output 0/4...20 mA)
Digital output (optional)	Current limitation 100 mA
Analogue input (Actual value signal for process controller function) (optional)	
4...20 mA	Input resistance: 60 Ω Resolution: 12 bit
Frequency	Measuring range: 0.2...6500 Hz Input resistance: >30 kΩ Accuracy: 0.1 % of measured value Input signal: >300 mVpp Signal shape: sine, rectangle, triangle
Pt 100	Measuring range: -20...+220 °C Accuracy: 0.01 °C Measuring current: 1 mA
Communication	
Communication interface (büS)	Connection to PC via USB büS interface set (connection terminals, circular plug-in connector or büS service interface)
Communication software (büS)	Bürkert Communicator, see Type 8920 ▶

6. Product design and assembly

6.1. Product features

Note

More detailed information can be found in the **operating instructions** ►.

User interface	
<p>Device without display module: In the version without operating display, the basic functions are operated via 4 DIP switches and 2 push buttons. These are located under the blind cover, which can be removed by turning it manually. The device can also be configured in detail with the Bürkert Communicator software via the bÜS service interface</p>	<p style="text-align: right;">Blind cover dismantled</p>
<p>Rugged Touch Display (optional): The robust display module offers convenient operation, configuration and display of all necessary functions. Besides the start screen, various views can be freely configured. The bÜS service interface is also available here under the display module. The display cannot be retrofitted in the field..</p>	
Actuation	
<p>Mechanical manual control: The manual override for mechanical movement of the valve is located under the blind cover or display module and ensures that the actuator can be operated even if the power supply fails.</p>	
<p>Electrical control via operating elements: The electrical manual override for operation can be carried out directly on the touch display or, in the version without display, via two buttons under the blind cover.</p>	
Display elements	
<p>Display 360° LED light ring: A clearly visible 360° LED ring is attached to the blind cover or display module to indicate the device status, the valve end position and the operating status. The LED light ring lights up, blinks or flashes into one or changing colours, depending on the LED mode set</p> <p>Mechanical position indicator: The mechanical position indicator shows the current valve position even if the supply voltage fails.</p>	
Data transmission (optional)	
<p>SIM card (optional): With the optionally available SIM card, device-specific values and user settings can be stored and quickly transferred to another device.</p>

Safety position via energy storage (optional)

The safety starting positions in case of power interruption is realized with the optional energy storage SAFEPOS energy-pack. The desired position is set via the menu. In addition to the end positions (open/closed), any desired intermediate position can be defined here. The energy storage has a lifespan of up to 10 years, depending on the operating conditions. The power of the energy storage is monitored and a warning is displayed to indicate its life is coming to an end. The storage device is designed as a plug-in module to facilitate replacement. Without energy storage, the valve remains in the last position it was in. The energy storage device is fully charged and ready for operation after a maximum of 100 seconds (depending on the operating conditions). The energy storage device cannot be retrofitted in the field.

Fieldbus: EtherNet/IP, PROFINET, Modbus TCP (optional)

The fieldbus gateway for EtherNet/IP, PROFINET and Modbus TCP is integrated in an additional module. It has 2 fieldbus connections with 4 pin M12 circular sockets. The interfaces for the fieldbus connection and the status LEDs are located under the gateway housing cover. If there is a need for it to be included in a network then the configuration of the Ethernet can be performed via the web server. The gateway cannot be retrofitted in the field.

6.2. Product assembly

The electromotive linear drive consists of a brushless DC motor, a gear and a spindle system that transfers the force to the control cone. The integrated control electronics are controlled either by standard signals (analog) or via a field bus (digital). A positioner and a process controller are available as controller versions. The electromotive linear actuator is designed to provide optimum efficiency. At the same time, it keeps the valve tight and in position even at the maximum specified medium pressure in a powerless standstill. An optional energy storage device (SAFEPOS energy-pack) is available for the device. If the supply voltage fails, it supplies the actuator with the energy required to move the valve into the desired position, which can be set in the menu.

The valve position can be changed manually in 2 ways. Either via the electrical manual control or via a mechanical manual control if no supply voltage is available. The device can be set and operated either via 2 capacitive keys and 4 DIP switches or optionally on a display with touch screen. In addition there is always the possibility to operate the device via the bÜS service interface and using the "Bürkert Communicator" software.

The intelligent process valve Type 3361 offers the operator options for process monitoring, valve diagnosis and preventive maintenance. Internal measurements of the operating status are evaluated and, if necessary, issued as a warning or error message. These signal, for example, impermissible ambient and process conditions, functional deviations of components or the status of the energy storage device. A special feature of the Globe Control Valve is the screwed-in valve seat, which can be replaced to reduce the seat size

7. Ordering information

7.1. Bürkert eShop – Easy ordering and quick delivery

Bürkert eShop – Easy ordering and fast delivery

You want to find your desired Bürkert product or spare part quickly and order directly? Our online shop is available for you 24/7. Sign up and enjoy all the benefits.

[Order online now](#)

7.2. Bürkert product filter

Bürkert product filter – Get quickly to the right product

You want to select products comfortably based on your technical requirements? Use the Bürkert product filter and find suitable articles for your application quickly and easily.

[Try out our product filter](#)

7.3. Ordering chart accessories

Note:

For connection to a bus/CANopen network see [cabling guide](#) ►.

Description	Article no.
Connection cable	
Connection cable with M12 socket, 4 pin, (length 5 m) for operating voltage (without communication)	918038 
Connection cable with M12 socket, 8 pin, (length 2 m) for input and output signals	919061 
Connection cable with M12 plug, 5 pin, (length 2 m) for input of process actual value signals (only for version with process controller)	559177 
USB-büS interface set	
büS stick set 1 (including power supply unit, büS-stick, terminating resistor, Y-distributor, 0.7 m cable with M12 connector)	772426 
büS stick set 2 (including bus-stick, terminating resistor, Y-distributor, 0.7 m cable with M12 connector)	772551 
büS adapter for büS interface set (M12 on büS service interface Micro USB)	773254 
büS cable extensions from M12 plug to M12 socket	
Connecting cable, length 1 m	772404 
Connecting cable, length 3 m	772405 
Connecting cable, length 5 m	772406 
Connecting cable, length 10 m	772407 
Miscellaneous	
Software Bürkert Communicator, Type 8920	LINK ►
