

# Intelligent differential pressure transmitter

## - Type KERADIFF 100 / 140 / 150 -

- FOR MEASURING DIFFERENTIAL PRESSURE, FILLING LEVELS AND FLOW
- RAPID USE AS A RESULT OF COMFORTABLE AND SIMPLE OPERATION
- 4...20 MA, HART® OR PROFIBUS OUTPUT
- MEASURING RANGES FROM 1 MBAR TO 40 BAR
- HIGH MEASURING ACCURACY < 0.1%
- TURNDOWN 100 : 1
- VARIOUS PROCESS CONNECTIONS

Version example: KERADIFF 100 with flange DIN 19213

### Description

The KERADIFF 100 has a robust, highly overload-resistant silicon sensor with an outstanding capacity for high measuring accuracy, vacuum resistance and reliability for all long-term stable measurements. The high-performance measuring system is used to measure differential pressure, filling levels and flow, in connection with differential pressure transmitters, for gases, vapours and liquids. The devices are suitable for differential pressure as well as for positive and negative overpressure.

Medium- and process-suitable materials as well as different design variants allow the use of these devices with corrosive or abrasive media, as well as for processes with high aseptic requirements (e.g. in the food or pharmaceutical industry). Flush-mounted versions and pressure transmitters for almost all process connections are available for filling level applications.

Various types of measuring cells for graded measuring ranges ranging from 10 mbar, PN 160 bar, to 40 bar, PN 420 bar, thus allowing for optimal adaptation to the process conditions.

The digital communication signal (HART® protocol) can be superimposed onto the 4...20 mA signal and offers all information required for teleparametrisation (smart technology), as well as the version with the Profibus PA.

### VERSIONS

Type	KERADIFF 100	KERADIFF 140	KERADIFF 150
<b>Selection criterion</b>	<ul style="list-style-type: none"><li>• Static pressures up to 420 bar</li><li>• Differential pressures up to 40 bar</li></ul>	<ul style="list-style-type: none"><li>• Filling level measurement in pressurised containers</li></ul>	<ul style="list-style-type: none"><li>• Flanges from DN 50...DN 100</li><li>• for high medium temperatures</li></ul>
<b>Process connection</b>	1/4" – 18 NPT, RC 1/4"	Bilaterally via a capillary tube with pressure transmitters in standard industrial forms	Flange on plus side, minus side according to DIN 19213
<b>Standard application</b>	<ul style="list-style-type: none"><li>- Flow measurement in connection with differential pressure transmitter</li><li>- Filling level measurement on containers</li><li>- Differential pressure measurement for filter monitoring and pump control</li></ul>	<ul style="list-style-type: none"><li>Filling level and differential pressure measurement of corrosive, highly viscous and hot media in the event of pressurisation, e.g. food and pharmaceuticals.</li></ul>	<ul style="list-style-type: none"><li>Filling level and pressure measurement of corrosive and high-temperature media</li></ul>

### TECHNICAL DATA

<b>General information</b>	
Device type	KERADIFF
Application	Differential pressure measurement
Measuring sensor	Silicon sensor
<b>Output</b>	
Output signal	4...20 mA with superimposed HART® protocol or PROFIBUS PA
Breakdown signal	3.6 mA minimum alarm, 21 mA maximum alarm
Current limit	3.8 mA; 20.5 mA
Resolution	Current output: 1µA Display: adjustable
<b>Measuring accuracy</b>	
Influence of the system pressure on the zero point and range	0.2% / 100bar
Thermal change	± 0.2% for -40...-10°C or +60...+85°C
Temperature coefficient for zero signal or output range	0.02% / 10K (-10...+60 °C) and 0.1% / 10K (-40...-10 °C or +60...85°C)
Temperature coefficient of the pressure transmitter	see pressure transmitter table for $T_K$ of the zero point
Deviation from the characteristic curve:	max. 0.1% max. 0.2% for the measuring limit range
Hysteresis:	0.1% of the set range
Repeatability:	0.1% of the set range
Heating time:	4...20 mA HART® < 10s, PROFIBUS PA 6s
Setting time:	between 0.5 and 2s, depending on the measuring range
Rise:	between 0.4 - 1.6s, depending on the measuring range
Long-term drift	0.2% / a
Adjustable attenuation	0...999s, adjustable via on-site operating field or PC (factory setting: 2s)
<b>Conditions for use</b>	
Medium temperature	-40...+85 °C
Nominal temperature	-40...+85 °C
Operating temperature	-40...+85 °C -20...+70 °C with on-site display
Storage temperature	-40...+100 °C -40...+85 °C on-site display
Protective class according to EN 60529	IP 67
Electromagnetic compatibility (EMV)	Electromagnetic compatibility according to EN 61326 and NAMUR recommendation EMV (NE21)
Vibration strength	± 0.1% according to DIN/IEC 68, Part 2-6, based on sensor range, measured on a 6000 mbar sensor
Installation position	Any, compensation when calibrating the measuring start
<b>Auxiliary energy</b>	
Supply voltage	11.5...45V
Residual ripple	No influence for 4...20 mA signal up to ± 5% residual ripple
<b>Design configuration</b>	
Materials	<p>Housing: Copper-free die-cast aluminium housing with a protective coating on a polyester basis, grey, resistant to seawater, salt-spray test DIN 50 021 (504 hours) passed, optional process connection, O-rings made from NBR for cover sealing, assembly bracket made from C22.8</p> <p>Membrane: AISI 316 L</p> <p>Flange: DIN 19213 from AISI 316 L</p> <p>For KERADIFF 140, 150: Pressure transmitter from AISI 316 L, see corresponding data sheets, special materials a..A: Capillary tube and holding pipe made of AISI 316 L</p> <p>KERADIFF 150: Installation of the pressure transmitter: rigid connection via holding flange (see diagram) or via a capillary tube (max. 8 m), to be specified if required</p>
Process connections	All standard and common connections (see dimensional drawings)
Electrical connection	M20x1,5 Terminal connection with built-in inter-clock diode for cable diameters of 0.5 to 2.5 mm <sup>2</sup> , two-wire connection cable with a standard installation cable.
Climate class	Class 4K4H (air temperature: -20...+55°C, relative humidity: 4...100%) according to DIN EN 60721-3-4 fulfilled (condensation possible)

### MEASURING RANGES

Nominal value [mbar]	Measuring limit		Smallest calibratable measuring range [mbar]	Maximum operating pressure [bar]	Overload		Minimum system pressure [mbar <sub>abs</sub> ]
	lower (LRL) [mbar]	upper (URL) [mbar]			unilateral [bar]	bilateral [bar]	
10'	-10	+10	0.25	160	160	240	0.1
30'	-30	+30	0.3	160	160	240	0.1
100	-100	+100	1	160	160	240	0.1
500	-500	+500	5	160/420	160/420	240/630	0.1
3000	-3000	+3000	30	160/420	160/420	240/630	0.1
16000	-16000	+16000	160	160/420	160/420	240/630	0.1
40000	-40000	+40000	400	160/420	"+" side: 160/420 "-" side: 100	240/630	0.1

\* for KERADIFF with CRN-approved process connection 315 bar

### ELECTRICAL CONNECTION

#### 4...20 mA HART

- 1. Housing
- 2. Jumper for 4...20 mA test signal
- 3. Internal earth terminal
- 4. External earth terminal
- 5. 4...20 mA test signal between the plus and test terminal

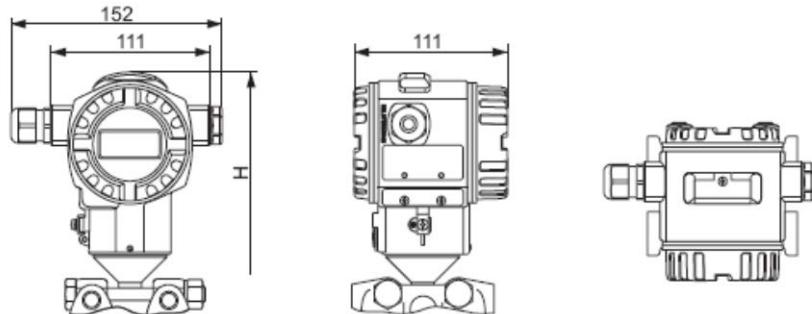

- 6. Minimum voltage supply = 10.5 V DC, jumper is attached according to diagram
- 7. Minimum voltage supply = 11.5 V DC, jumper is attached in "test" position
- Devices with integrated overvoltage protection are labelled with "OVP" (overvoltage protection) at this point.

### OPERATING ELEMENTS - on-site display

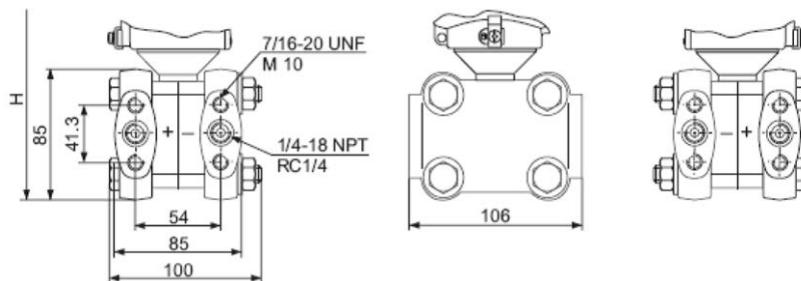

Button	Significance
	<ul style="list-style-type: none"> <li>- Scroll up in the selection list</li> <li>- Editing the values or symbols of a function</li> </ul>
	<ul style="list-style-type: none"> <li>- Scroll down in the selection list</li> <li>- Editing the values or symbols of a function</li> </ul>
